Vision Amusement Park

Three ways to fund the company rather than the projects — equity, guaranteed debt, and debt that becomes equity. One is materially cheaper than the headline round, and one balance-sheet move has to happen before any of them.

Vision Amusement Park Pvt. Ltd. · CIN U93000DL2011PTC212814
FY25-26 revenue ₹16.29 Cr · EBITDA ₹2.37 Cr · net worth ₹2.58 Cr · borrowings ₹7.85 Cr

01 Where the company stands

Only what determines whether VAPPL can borrow, and at what price.

FY25-26 position	Amount	What a credit committee sees
Revenue	₹16.29 Cr	All-time high, +27% year on year, four parks operating
EBITDA	₹2.37 Cr	14.5% margin — a ramp year, below the 36% single-park benchmark of FY22-23
Net worth	₹2.58 Cr	Positive and improving. Was negative ₹1.30 Cr in FY22-23
Total borrowings	₹7.85 Cr	₹5.26 Cr short-term across 13 facilities, ₹2.60 Cr from related parties
Debt to equity	3.04×	Too high. Most banks want under 2× for an unsecured facility
Current ratio	~0.50×	Below 1.0 every year — structurally dependent on revolving credit
Electricity arrears	**₹2.14 Cr**	**A red flag on any sanction note**

VERDICT

Four things stand between VAPPL and a bank sanction

Debt to equity at 3.04×. Thirteen separate NBFC and bank facilities, which reads as distress borrowing regardless of how it arose. ₹2.14 Cr of electricity arrears — a live utility default is the single item most likely to stop a sanction note. And a current ratio below 1.0 in every year on record. None of the options in this deck should reach a lender before these are fixed.

02 MSME status and CGTMSE eligibility

CGTMSE covers micro and small enterprises only. VAPPL's eligibility is not marginal — but it has an expiry date, and the date is inside this plan.

INVESTMENT IN PLANT & MACHINERY

₹6.13 Cr

Against a ₹25 Cr Small Enterprise limit — ₹18.87 Cr of headroom

ANNUAL TURNOVER

₹16.29 Cr

Against a ₹100 Cr limit — ₹83.71 Cr of headroom

CLASSIFICATION

Small Enterprise

CGTMSE eligible. Both tests cleared

Facility size	Standard annual guarantee fee
Above ₹1 crore and up to ₹2 crore	0.85%
Above ₹2 crore and up to ₹5 crore	1.00%
Above ₹5 crore and up to ₹8 crore	1.10%
Above ₹8 crore and up to ₹10 crore	**1.20%**

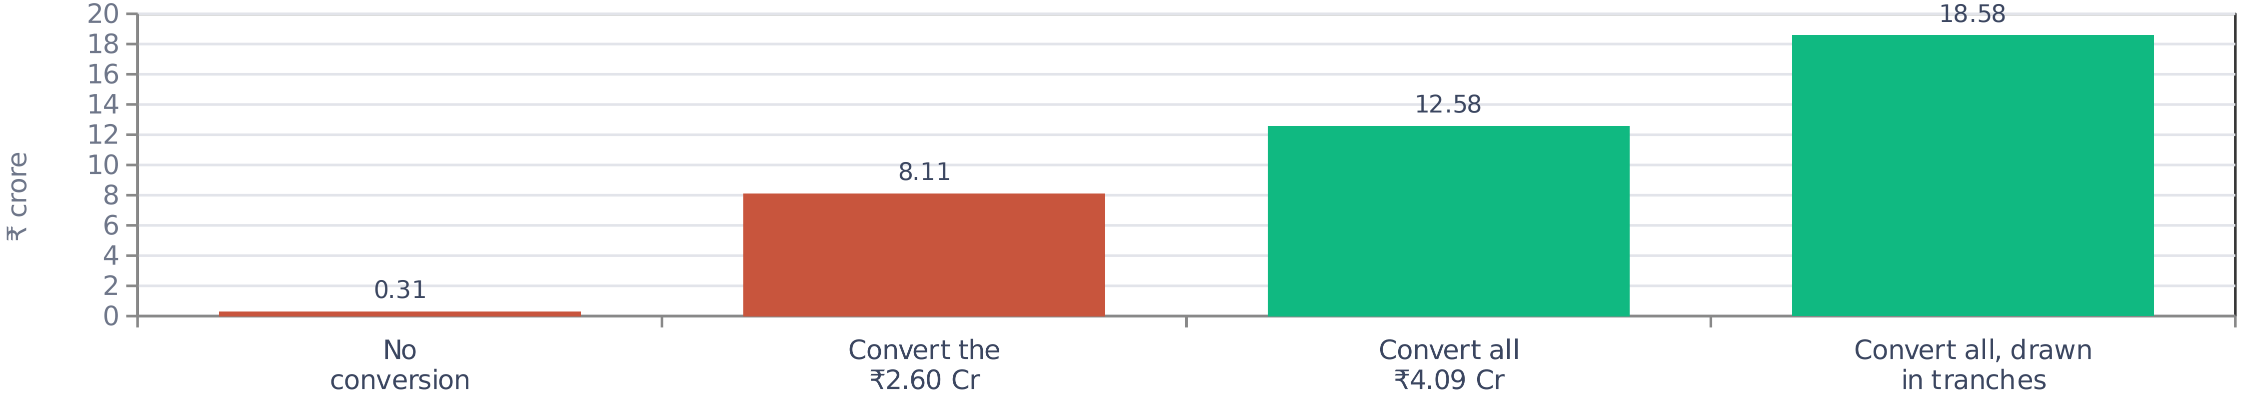
NOTE

The thresholds moved in VAPPL's favour on 1 April 2025

Small Enterprise limits rose to ₹25 Cr of investment and ₹100 Cr of turnover, and the CGTMSE ceiling doubled to ₹10 Cr per borrower. Both landed after the ₹10 crore equity round was designed — which is the reason this pack exists. A facility sanctioned while the company qualifies keeps its cover for its full tenor.

03 Fix the balance sheet first

Before raising anything there is a free move. Roughly ₹4 crore of VAPPL's ₹7.85 crore of borrowings is money the promoters already put in. Converting it costs no cash and transforms the balance sheet a lender is asked to lend against.



Conversion	Net worth	D/E once ₹10 Cr is drawn	Max facility at 2.0×
No conversion	₹2.58 Cr	5.76×	₹0.31 Cr
Convert the ₹2.60 Cr long-term related-party loans	₹5.18 Cr	2.36×	₹8.11 Cr
Convert all related-party and promoter debt	**₹6.67 Cr**	**1.61×**	**₹12.58 Cr**
Convert all, drawn in tranches as FY26-27 earnings retain	₹9.67 Cr	1.11×	₹18.58 Cr

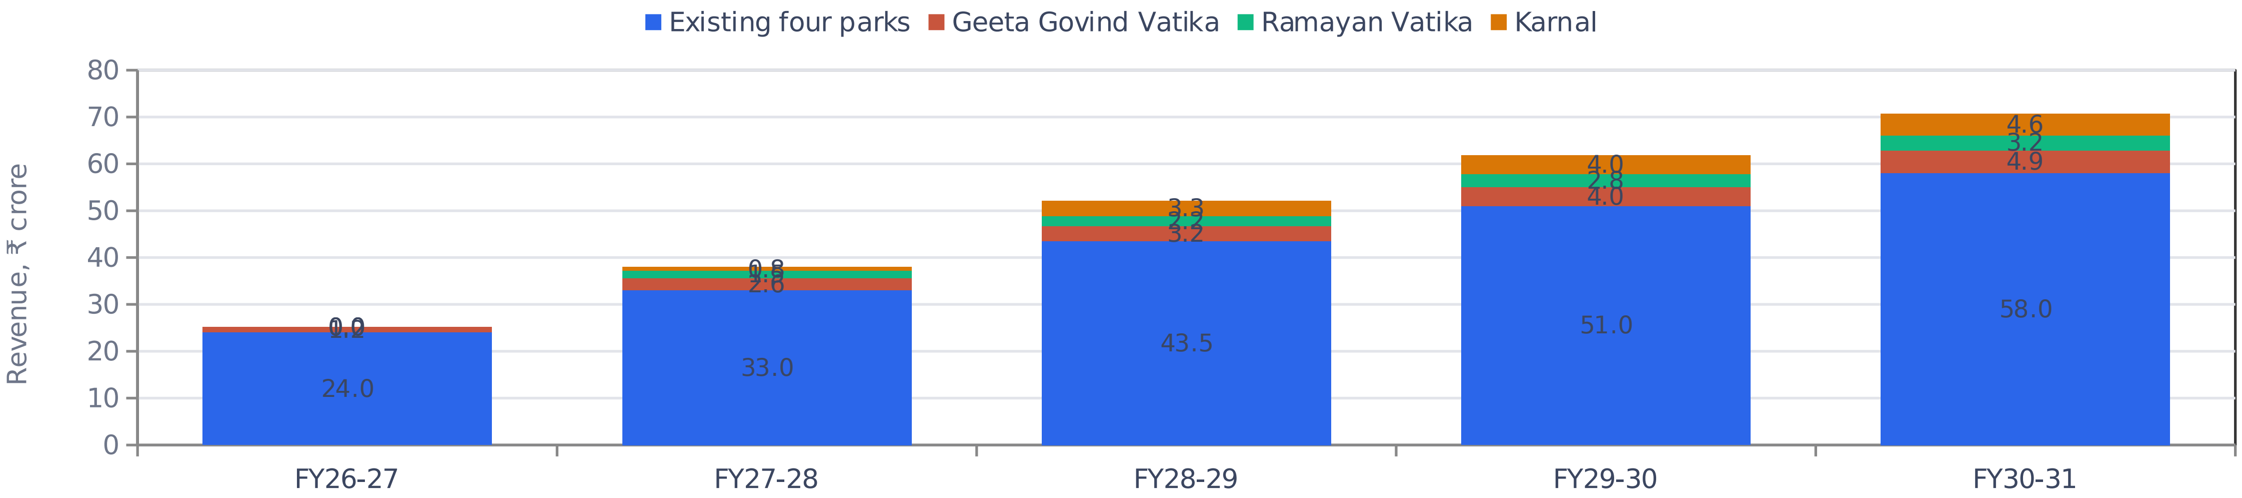
VERDICT

Converting only the ₹2.60 crore is not enough

Converting ₹2.60 Cr caps the facility at ₹8.11 Cr. Converting all ₹4.09 Cr lifts it to ₹12.58 Cr. Converting nothing supports ₹0.31 Cr — the company cannot borrow at all.

04 The consolidated plan

The existing four parks plus all three new projects, phased on the award and opening dates assumed in each project deck. Existing-portfolio figures are the midpoints already published in the company financial model.



FY30-31 REVENUE

₹71 Cr

From ₹16.29 Cr in FY25-26

FY30-31 EBITDA

₹21 Cr

29.1% margin

NEW PROJECTS' SHARE

18%

Of FY30-31 revenue. EMV was 73% of the group in FY25-26 — concentration risk materially reduced

05 Option A · Equity

The existing round is ₹10 crore at ₹90 crore pre-money. Funding all three new projects with equity would take it to roughly ₹16 crore. Here is what that returns to the person writing the cheque.

Exit basis	Value
Revenue at exit — FY30-31, five years from a September 2026 close	₹71 Cr
Enterprise value at 3.0× revenue (11× EBITDA cross-checks at ₹226 Cr)	₹212 Cr
Equity value at exit, net of debt	₹204 Cr
Investor proceeds — 15.1% of exit equity value	₹31 Cr
Investor IRR over five years	**14.0%**

Investor hurdle	Stake required	Implied pre-money
18% — family office, strategic	17.9%	₹73 Cr
22% — lower-quartile growth fund	21.2%	₹60 Cr
25% — institutional growth equity	23.9%	₹51 Cr
At the asking price	**15.1%**	**₹90 Cr**

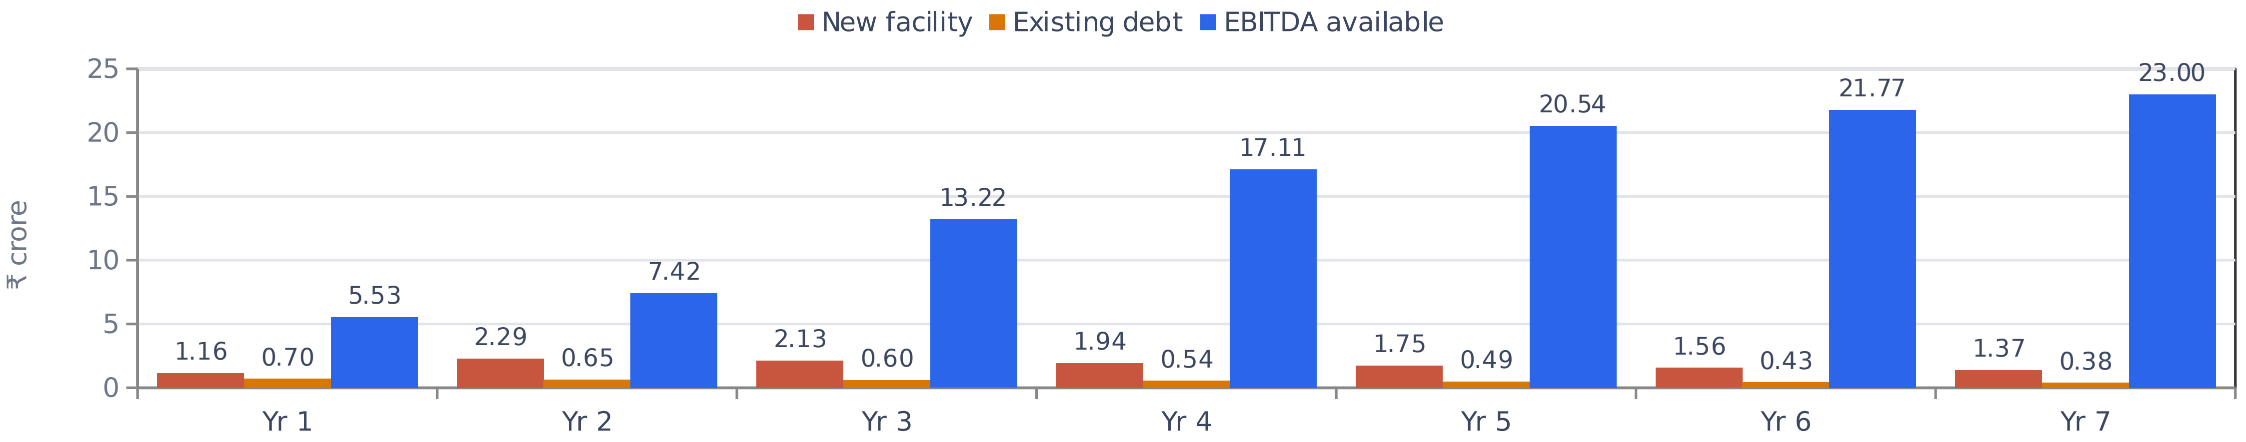
VERDICT

₹90 crore pre-money prices most of the growth in

At ₹90 crore pre-money an investor earns 14.0% over five years — an argument about counterparty, not valuation.

06 Option B · Debt under CGTMSE

A single collateral-free composite facility: a term loan for the project build-outs and a working-capital limit that consolidates the NBFC book.



TOTAL FACILITY

₹10 Cr

Term loan ₹6.50 Cr + working capital ₹3.50 Cr

ALL-IN COST

12.70%

11.50% interest + 1.20% guarantee fee

MINIMUM DSCR

2.52×

Including the existing ₹7.85 Cr book, not just the new facility

TOTAL FINANCE COST

₹5.70 Cr

Over seven years, against ₹31 Cr for the equivalent equity

VERDICT

The debt is roughly a fifth of the cost of the equity

₹10 Cr collateral-free at 12.70% costs ₹5.70 Cr over seven years — against ₹31 Cr for the equivalent equity, on the company's own projections.

07 Option C · Debt converted to equity

Money in as debt at a coupon, converting into equity on a fixed formula three years out. At company level — unlike at project level — this is genuinely competitive with both alternatives.

Term	Structure
Principal	₹12 Cr
Coupon, annual until conversion	8.0%
Conversion — compulsory	End of year 3, into 13.0%
Implied conversion valuation, post-money	₹92 Cr
Coupon paid to conversion	₹2.88 Cr
Investor IRR	**21.5%**
Money multiple	**2.45×**

VERDICT

The best risk-adjusted structure — with one condition

21.5% against 14.0% for straight equity at the same valuation and exit. Dilution is deferred three years, and 13.0% converted at ₹92 Cr is cheaper than 15.1% sold today at ₹90 crore pre-money.

The condition: a CCD is borrowing until it converts. Convert the related-party debt first, or agree in the sanction letter that the CGTMSE leverage covenant excludes compulsorily convertible instruments.

08 Which option, and why

OPTION A

Equity

14.0%

INVESTOR IRR

Money in	₹16 Cr
Dilution	15.1% immediately
Cost in FY30-31 money	₹31 Cr
Time to close	4–8 months

OPTION B

Debt · CGTMSE

₹5.70 Cr

TOTAL COST OVER 7 YEARS

Money in	₹10 Cr
Dilution	None
All-in rate	12.70%
Time to close	6–12 weeks

OPTION C

Debt → equity (CCD)

21.5%

INVESTOR IRR

Money in	₹12 Cr
Dilution	13.0% in year 3
Cost in FY30-31 money	₹29 Cr
Time to close	3–6 months

VERDICT

All three, in sequence — not one instead of the others

Step 1, now, no external party: convert all ₹4.09 Cr of related-party and promoter debt. Gearing falls to 0.56×, clear the arrears, consolidate the NBFC book. · Step 2, the cheap capital: a ₹10 Cr CGTMSE facility at 12.70% all-in, ₹5.70 Cr total cost. · Step 3, the equity, smaller and later: with the debt in place the round need not be ₹16 Cr — ₹6–8 crore covers what debt cannot reach, at roughly half the dilution.

09 Conditions precedent to any lender approach

Convert all ₹4.09 Cr of related-party debt

Takes D/E from 3.04× to 0.56×, and to 1.61× once drawn. Converting only the ₹2.60 Cr caps the facility at ₹8.11 Cr; converting nothing caps it at ₹0.31 Cr. Board resolution.

Clear the ₹2.14 Cr electricity arrears

A live utility default is the single item most likely to stop a sanction note in its tracks. Settle or formally reschedule with the discom before applying.

Consolidate the NBFC book

Thirteen facilities read as distress borrowing. Reduce to a countable number before applying — a lender will covenant against re-borrowing anyway.

Confirm Udyam registration and NIC code

CGTMSE cover requires a live registration on the correct activity code for the borrowing entity. Confirm before the application, not after a rejection.

Complete the FY25-26 audit

Provisional accounts carry a ₹54.5 lakh depreciation placeholder against an estimated ₹1.0–1.1 Cr. Net worth moves; EBITDA and DSCR do not. Expected August 2026.

Obtain BDA consent for any change of control

Ramayan Vatika's lock-in bars shareholding changes without prior written approval. Applies to the equity round and to CCD conversion alike.
