

Three projects, one balance sheet

Geeta Govind Vatika on guaranteed debt; Ramayan Vatika and Karnal each modelled as equity, guaranteed debt, and debt that converts to equity — plus the company-level view that ties them together. Built on the ₹10 crore CGTMSE ceiling that came into force in April 2025.

Vision Amusement Park Pvt. Ltd. · CIN U93000DL2011PTC212814 · MSME classification Small Enterprise

Prepared August 2026 · every figure generated from model/pf_model.py

TOTAL FUNDING SOUGHT

₹9.2 Cr

Across the three projects, as briefed

TRUE CAPITAL AT RISK

₹7.3 Cr

The balance is revolving liquidity

CGTMSE CEILING

₹10 Cr

Per borrower — the binding constraint

GROSS DEMAND

₹12.2 Cr

₹2.2 Cr over the ceiling

01 The three projects, compared

The same analysis three times. What differs is how much capital each consumes, and what it earns on it.

	Geeta Govind Vatika	Ramayan Vatika	Karnal
Counterparty	Agra Dev. Authority	Bareilly Dev. Authority	A4A Highway Nest LLP
Term / lock-in	7 + 4 yrs · none	10 + 5 yrs · 5 years	15 yrs · none
Funding sought	₹1.00 Cr	₹4.17 Cr	₹4.00 Cr
True capital at risk	₹0.58 Cr	₹2.36 Cr	₹4.38 Cr
Stabilised EBITDA margin (yr 5)	32.3%	20.3%	37.7%
Project IRR	55.5%	11.4%	19.5%
Spread over guaranteed debt	+43.4 pp	-1.1 pp	+7.0 pp
Minimum DSCR at the size asked	1.87×	1.09×	1.48×
Assets a lender can charge	None — ADA owns all	None — expressly barred	Yes — E-O-D owns fit-out
Equity IRR at project level	Not offered — debt only	5.4%	8.2%
Recommended instrument	CGTMSE debt	CGTMSE debt, at reserve	CGTMSE debt

VERDICT

One instrument, three different routes to it

Geeta Govind Vatika is offered on debt only: a guaranteed facility supplies the whole ₹1.00 Cr at 12.10%, no collateral and no dilution, so there is nothing an equity structure would buy that it does not already provide. Karnal earns 19.5% and Ramayan Vatika 11.4%; neither clears an equity hurdle at project level. A single park generating ₹1–2.5 crore of mature EBITDA cannot pay a 22% return and leave an operator's margin. Equity belongs at company level, where it buys a portfolio rather than one wasting licence.

02 The CGTMSE framework

Every debt structure in this pack rests on the Credit Guarantee Fund Trust for Micro and Small Enterprises. The scheme changed materially on 1 April 2025, and the change is what makes this pack possible.

GUARANTEE CEILING ₹10 Cr Doubled from ₹5 Cr on 1 April 2025. Per borrower, aggregated across all lenders	COVERAGE FOR A SMALL ENTERPRISE 75% Up to 85% for micro, women-owned, NER and ZED units	COLLATERAL REQUIRED Nil On the guaranteed portion. Third-party guarantee not permitted; director personal guarantee is
--	---	--

Parameter	Position
Eligible borrowers	Micro and small enterprises with a live Udyam registration. Amusement and recreation is a covered service activity
Ceiling basis	Per borrower, across all member lending institutions — four sanctions from four banks still share one ceiling
Hybrid security	Permitted — collateral on part of a facility with the remainder guaranteed. The route for exposure above the ceiling
Interest rate	MLI rate not to exceed ~3% over its EBLR or MCLR. NBFC pricing for the same borrower runs 14–22%
Guarantee fee basis	On the sanctioned amount in year 1; on the outstanding thereafter — an over-sanctioned, undrawn limit is expensive

VERDICT
Verify before you apply, not after
CGTMSE parameters are revised by circular and vary between lending institutions. These reflect the April 2025 revisions, checked against public sources in August 2026. Confirm the operative circular with the lender before relying on any number here.

03 The ceiling problem

The single most important structural fact in the pack, and easy to miss: the ₹10 crore ceiling is per borrower — not per project, per facility or per lender.

GROSS DEMAND

₹12.2 Cr

Adding the composite facilities from each deck plus company working capital

CGTMSE CEILING

₹10 Cr

Per borrower, across all member lending institutions

TO FUND ANOTHER WAY

₹2.2 Cr

Hybrid security, or the company-level equity round

NOTE

Routes for the residual

Hybrid security is preferred — CGTMSE permits collateral on part of a facility with the balance guaranteed, needing no new entity and no consent. The company-level round covers the rest. Separate SPVs are legally available but fail the eligibility tests in both RFPs.

THE RECOMMENDED SEQUENCE

Debt is the cheap capital, and it only just became available

The ₹10 crore equity round was designed before the CGTMSE ceiling doubled and the MSME thresholds were raised, both on 1 April 2025. VAPPL is a Small Enterprise with ₹18.9 crore of investment headroom and ₹83.7 crore of turnover headroom, and can now access ₹10 Cr of collateral-free guaranteed debt at 12.70% all-in. Two of the three new projects out-earn that cost by six to seven percentage points; none out-earns an equity hurdle.

1

Convert the promoter debt

All ₹4.09 Cr of related-party and promoter debt to equity. Gearing $3.04\times \rightarrow 0.56\times$. No cash, no third party, no permission. Without it a $2.0\times$ covenant caps the facility at ₹0.31 Cr.

2

Bank Karnal first

A ₹3.00 Cr CGTMSE term loan. The cleanest credit in the pack, and the sanction that establishes the track record the two concession facilities will need.

3

Bid the two concessions

Only on award, and only at a price the board has approved in advance. Both are auctions, both fees escalate for the full term, and winning at the wrong price is worse than losing.

4

Raise the equity, smaller

With ₹10 Cr of guaranteed debt in place the round need not be ₹16 crore. ₹6-8 crore covers what debt cannot reach, at roughly half the dilution — or a CCD at 21.5% without repricing the company.

05 What still has to be verified

These decks are a model, not a due-diligence report. Everything below is unknown, inconsistent in the source documents, or dependent on a third party — and each moves numbers.

● **Karnal footprint**

22,000 sq ft in index.html against ~6 acres in financials.html. Sizes the entire Karnal revenue thesis. Answer: the executed sub-lease.

● **Geeta Govind Vatika show tariff**

Not set in the RFP — left to be agreed with ADA. Roughly a third of GGV's revenue rests on a rate E-O-D does not control.

● **Ramayan Vatika show conversion**

42% assumed here against BDA's 60% — the difference between 11.4% and 36.1%. Answer: BDA, on slot capacity and soft-launch footfall.

● **Winning licence fees**

Both are competitive processes with no cap. Both models are built on assumed bids and must be re-run on award.

● **Ramayan Vatika lock-in**

Seven years in clause 9 against five in clause 14. A seven-year lock-in on a seven-year payback changes the risk materially. Answer: pre-bid clarification.

● **CGTMSE current circular**

Fee slabs, coverage and ceiling as published April 2025. Confirm with the lending bank's MSME desk before relying on the basis points.
